

## GKI-ERSTE ECONOMIC SENTIMENT INDEX STAGNANT FOR FOUR MONTHS

The GKI-Erste economic sentiment index adjusted for seasonal effects moved upwards slightly in April, reaching its level of January. According to the empirical survey conducted by GKI ([www.gki.hu](http://www.gki.hu)) with the support of the EU both business and consumer expectations improved slightly over March.

In April in the **business sphere** expectations remained unchanged or only slightly improved in all sectors except trade. **Industrial** confidence indices stagnated in April; the assessment of past production did not change, that of production prospects improved, whereas that of orders deteriorated (though export orders improved). Respondents considered inventories slightly higher. The **construction** confidence index improved somewhat: the assessment of production in the preceding three months became more favourable, whereas that of orders remained virtually unchanged. The rise of the **trade** confidence index was the most significant; however, it remained within the relatively narrow band in which it fluctuated in the past one and a half years. The assessment of sales positions, inventories and expected orders picked up. The **services** confidence index stagnated in April. The evaluation of the general business climate remained unchanged, that of the turnover in the last period improved, whereas prospects for the next period deteriorated.

**Intentions to raise prices** weakened in industry and services in April. In construction the share of firms anticipating price rises was practically the same as that of firms expecting price reductions, and the vast majority of respondents continue to expect prices remaining unchanged. In trade the share of those planning price rises decreased further. The average size of price increases went up slightly. The inflationary expectations of consumers rose as well. Intentions to employ improved slightly in all sectors except trade. The fear of unemployment of households intensified. **Expectations about the development of the Hungarian economy** improved somewhat in industry, they remained unchanged in trade, whereas they deteriorated in construction, services and among households.

**GKI's consumer confidence index** picked up slightly in April after a decrease in March. The assessment of consumers' own financial position turned better, whereas the prospects of their saving capacity hardly better for the next 12 months compared with the previous one-year period. Households considered the current conditions of purchasing high-value durables better but their expectations for the next 12 months were stagnant in this respect.

### EXPLANATION TO THE METHODOLOGY:

In line with the methodology used by the EU, GKI surveys the expectations of industry, trade, construction, services and households in the calculation of its business confidence index. GKI-Erste economic sentiment index is the weighted average of the consumer confidence index and the business confidence index.

The business confidence index is calculated from the responses of enterprises in industry, trade, construction and services given to questions concerning the state of business and expectations of turnover and employment. (As far as services are concerned, similarly to the practice of the EU, companies of the financial and public sectors have not been included in the surveys yet.) GKI publishes seasonally adjusted data by using appropriate mathematical methods to filter out the discrepancies caused by seasonal effects (e.g., differences in weather conditions between winter and summer, increased demand before Christmas, lower output because of summer vacations).

The consumer confidence index is calculated from responses given to questions concerning the expected financial position of households, the expected economic and unemployment situation of the country, and the prospects for saving.

## GKI-ERSTE ECONOMIC SENTIMENT INDEX AND ITS ELEMENTS, 2009-2015

Year	Month	Business confidence index	Consumer confidence index	GKI-Erste economic sentiment index
2009.	I.	-30.3	-66.1	-39.6
	II.	-33.9	-68.5	-42.9
	III.	-37.4	-70	-45.8
	IV.	-36.3	-72.3	-45.7
	V.	-29	-68.3	-39.2
	VI.	-28.9	-64.3	-38.1
	VII.	-24.7	-63.1	-34.7
	VIII.	-22.2	-59.8	-32
	IX.	-22.1	-56.9	-31.2
	X.	-17.8	-50.8	-26.4
