

DETERIORATING CONSUMER AND IMPROVING BUSINESS EXPECTATIONS

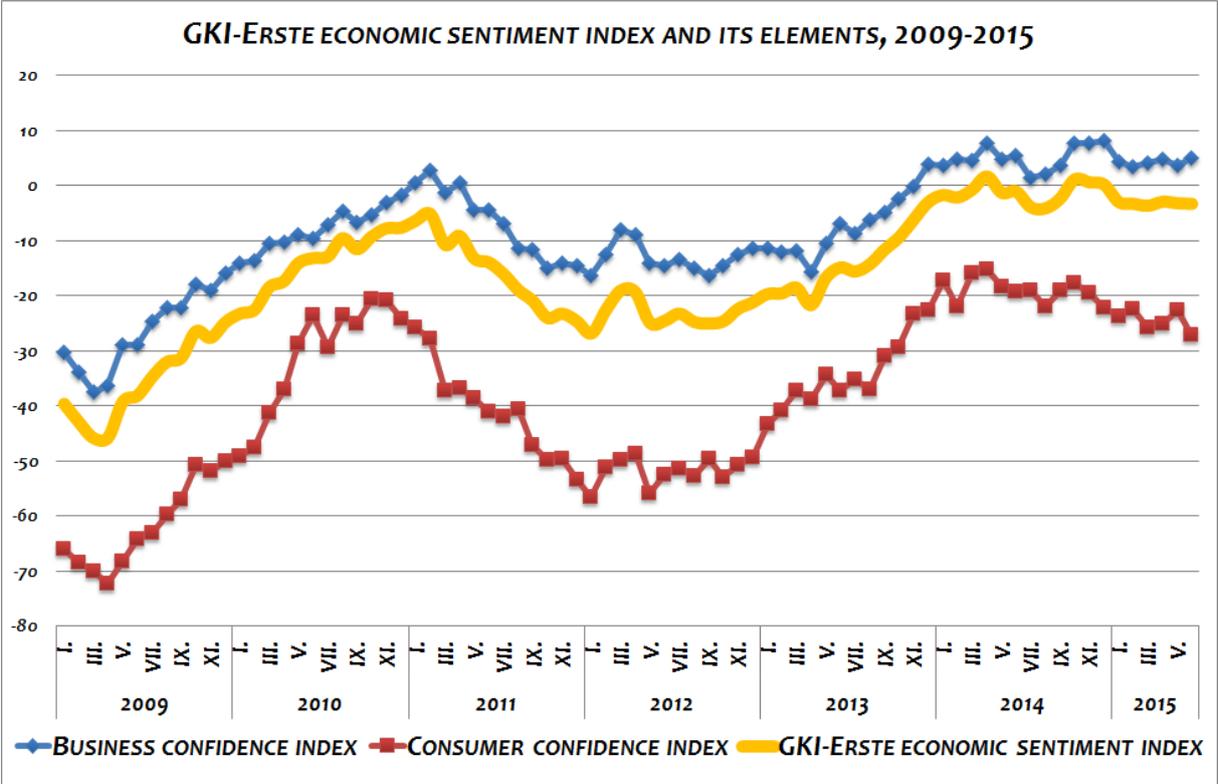

June was the sixth month when the GKI-Erste economic sentiment index adjusted for seasonal effects remained unchanged, with some fluctuations, reflecting a relatively optimistic mood. According to the empirical survey conducted by GKI (www.gki.hu) with the support of the EU business expectations reached their peak this year, whereas consumer ones deteriorated to their lowest level in the past twenty months.

In June expectations improved noticeably in all sectors of the **business sphere** except for services, where they became significantly optimistic in May. With the exception of construction, the number of companies **expecting improvement still slightly exceeds** those anticipating deterioration. **Industrial** expectations were optimistic in June after being pessimistic in May. In industry, the assessment of production of both the last and the next periods improved and that of orders (including export orders) picked up significantly. However, respondents considered inventories higher. The **construction** confidence index rose significantly in June, reaching its level of the beginning of the year. The assessment of production in the preceding quarter improved slightly, whereas that of orders went up significantly. In June the **trade** confidence index increased less than its decline in May, thus remaining within the relatively narrow band in which it fluctuated in the past one and a half years. The assessment of sales positions and expected orders remained unchanged; whereas the stock of orders was considered significantly lower by respondents. The decline in the **services** confidence index in June eliminated its increase during the previous month. The evaluation of the general business climate and sales in the preceding quarter and the subsequent periods declined.

The intentions of **employment** in trade did not deteriorate further; they improved in industry and construction, whereas they declined in services. The fear of unemployment of households intensified. **Intentions to raise prices** increased in industry and services. The vast majority of construction companies expect unchanged prices. In trade the share of those planning price rises decreased considerably. The average size of price increases remained unchanged. However, inflationary expectations of households intensified. The assessment of the prospects of the **Hungarian economy** had been deteriorating for several months, and with the exception of industrial and service companies this trend continued in June as well.

The **GKI consumer confidence index** dropped in June to a greater extent than its increase in May. Households assessed both their financial situation for the following year and their savings capacity in the next year worse than in the previous month. Households consid-

ered the conditions of purchasing high-value durables to be unchanged; however, those for the next year were perceived significantly deteriorating.

EXPLANATION TO THE METHODOLOGY:

In line with the methodology used by the EU, GKI surveys the expectations of industry, trade, construction, services and households in the calculation of its business confidence index. GKI-Erste economic sentiment index is the weighted average of the consumer confidence index and the business confidence index.

The business confidence index is calculated from the responses of enterprises in industry, trade, construction and services given to questions concerning the state of business and expectations of turnover and employment. (As far as services are concerned, similarly to the practice of the EU, companies of the financial and public sectors have not been included in the surveys yet.) GKI publishes seasonally adjusted data by using appropriate mathematical methods to filter out the discrepancies caused by seasonal effects (e.g., differences in weather conditions between winter and summer, increased demand before Christmas, lower output because of summer vacations).

The consumer confidence index is calculated from responses given to questions concerning the expected financial position of households, the expected economic and unemployment situation of the country, and the prospects for saving.

GKI-ERSTE ECONOMIC SENTIMENT INDEX AND ITS ELEMENTS, 2009-2015

Year	Month	Business confidence index	Consumer confidence index	GKI-Erste economic sentiment index
2009.	I.	-30.3	-66.1	-39.6
	II.	-33.9	-68.5	-42.9
