GKI'S ECONOMIC SENTIMENT INDEX REMAINED CLOSE TO ITS PEAK IN AUGUST

GKI's economic sentiment index reached its historic peak in July. It decreased slightly in August, within the statistical margin of error. According to the empirical survey conducted by GKI (www.gki.hu) with the support of the EU, the business confidence index fell slightly in August over the previous month. However, consumer expectations increased a bit.

A slight deterioration in **business expectations** was the exclusive consequence of the fall in the industrial confidence index as expectations in construction and especially in trade improved, whereas those in services remained unchanged. Following their peak in July, **industrial** expectations returned to their level of June in August. In particular, the evaluation of the production of the preceding period deteriorated. In addition, the assessment of the stock of orders (including exports) and of inventories became somewhat less favourable. Production expectations, however, noticeably improved. Expectations in **construction** continued to soar in August, thus the confidence index of the sector rose to another historic peak. Compared to July, expectations of companies in structural and civil engineering became more favourable. The assessment of production in the preceding quarter improved considerably and that of orders became better slightly. After its slight decline in July, the **trade** confidence index rose significantly, reaching the upper zone of the relatively narrow band in which it had fluctuated for almost four years and approached its historic peak. In particular, companies were optimistic about the expected trend in orders, and the assessment of sales positions and the level of stocks also improved. The **services** confidence index remained unchanged in August. The assessment of the overall business of the previous three months became somewhat more favourable, whereas sales expectations deteriorated slightly.

Intentions of raising employment remained essentially unchanged in August: they deteriorated slightly in industry and trade, and improved somewhat in services. Fear of unemployment eased among households. With the exception of trade, where the proportion of companies planning to increase prices went up considerably, **intentions to raise prices** hardly changed: they were slightly weaker in industry and somewhat stronger in construction. Inflationary expectations, too, intensified noticeably among consumers. The assessment of the **Hungarian economy's prospects** in industry and trade deteriorated slightly, it improved in construction and in services, whereas it remained unchanged among consumers.

After its small decrease in July, the **GKI's consumer confidence index** reached its five-month peak in August. Households assessed their future financial situation and saving capability slightly better than in July.

EXPLANATION TO THE METHODOLOGY:

In line with the methodology used by the EU, GKI surveys the expectations of industry, trade, construction, services and households in the calculation of its business confidence index. GKI economic sentiment index is the weighted average of the consumer confidence index and the business confidence index.

The business confidence index is calculated from the responses of enterprises in industry, trade, construction and services given to questions concerning the state of business and expectations of turnover and employment. (As far as services are concerned, similarly to the practice of the EU, companies of the financial and public sectors have not been included in the surveys yet.) GKI publishes seasonally adjusted data by using appropriate mathematical methods to filter out the discrepancies caused by seasonal effects (e.g., differences in weather conditions between winter and summer, increased demand before Christmas, lower output because of summer vacations).

The consumer confidence index is calculated from responses given to questions concerning the expected financial position of households, the expected economic and unemployment situation of the country, and the prospects for saving.

GKI ECONOMIC SENTIMENT INDEX AND ITS ELEMENTS, 2011-2017

Year	Month	Business confidence index	Consumer confidence index	GKI economic sentiment index
