

26 FEBRUARY 2018

## GKI'S ECONOMIC SENTIMENT INDEX SURPASSED ITS PEAK

After nearly one and a half years of almost continuous growth, GKI's economic sentiment index rose to a new historic peak in February. According to the empirical survey conducted by GKI ([www.gki.hu](http://www.gki.hu)) with the support of the EU, business expectations have never been more favourable than now, and consumer expectations were more favourable only once, during the few months of the Medgyessy government's 100-day programme in 2002.

In the **business sphere** expectations in industry and trade improved and they both reflected unprecedented optimism in February. Although expectations in construction and services deteriorated slightly, they remained close to their historic peak. After its halt in January, the **industrial** confidence index continued to rise in February. The assessments of production and outlook as well as the stock of orders (including exports) improved. Respondents considered only the level of stocks declining. The outlook for **construction** companies continues to be very favourable, although the confidence index of the sector declined slightly compared to January. The assessment of production in the preceding three months decreased slightly, whereas the evaluation of incoming orders improved. After its slight decline in January, the **trade** confidence index reached its historic peak, definitely leaving the relatively narrow band in which it had fluctuated for almost four years. The assessment of sales positions and inventories also picked up; however, that of orders deteriorated (compared to its four-year peak). The **services** confidence index declined slightly in February. The declining evaluation of the general state of business played an important part in this. The evaluation of sales of the preceding period also worsened a bit.

**Intentions to employ** dropped somewhat in all sectors except for industry. The fear of unemployment of households strengthened slightly. **Intentions to raise prices** increased slightly in industry and construction. Those anticipating price decreases in the latter sector have almost disappeared. Price expectations in services and trade remained unchanged, whereas the inflationary expectations of consumers weakened slightly. The assessment of the **prospects of the Hungarian economy** declined somewhat in all sectors, especially in construction. However, optimism remained prevalent. Households were also very optimistic in this respect, and their assessment level did not change over January.

**GKI's consumer confidence index** rose slightly in February following a significant improvement in December and a minor correction in January. It was in November 2002 that households were more optimistic than now. Households evaluated their financial situation somewhat better and their expected savings capacity much better than in January. Households considered the possibility of purchasing high-value durables more likely as well.

#### EXPLANATION TO THE METHODOLOGY:

In line with the methodology used by the EU, GKI surveys the expectations of industry, trade, construction, services and households in the calculation of its business confidence index. GKI economic sentiment index is the weighted average of the consumer confidence index and the business confidence index.

The business confidence index is calculated from the responses of enterprises in industry, trade, construction and services given to questions concerning the state of business and expectations of turnover and employment. (As far as services are concerned, similarly to the practice of the EU, companies of the financial and public sectors have not been included in the surveys yet.) GKI publishes seasonally adjusted data by using appropriate mathematical methods to filter out the discrepancies caused by seasonal effects (e.g., differences in weather conditions between winter and summer, increased demand before Christmas, lower output because of summer vacations).

The consumer confidence index is calculated from responses given to questions concerning the expected financial position of households, the expected economic and unemployment situation of the country, and the prospects for saving.

## GKI ECONOMIC SENTIMENT INDEX AND ITS ELEMENTS, 2011-2017

Year	Month	Business confidence index	Consumer confidence index	GKI economic sentiment index
2011	01	0.5	-25.8	-6.3
	02	2.9	-27.7	-5.1
	03	-1.3	-37.3	-10.7
	04	0.6	-36.8	-9.1
