

22 MAY 2018

IMPROVING INDUSTRIAL AND CONSTRUCTION EXPECTATIONS, DETERIORATING CONSUMER, COMMERCIAL AND SERVICE EXPECTATIONS

The GKI economic sentiment index deteriorated marginally in May. According to the empirical survey conducted by GKI (www.gki.hu) with the support of the EU, this was the result of the deterioration in consumer expectations as business expectations improved slightly. Nevertheless, the GKI economic sentiment index is only slightly below its historic peak reached in February.

In the **business sector**, the industrial and construction confidence index rose to a new peak in May, whereas the optimism of service companies fell from its historic peak in April to its level a year ago, and expectations of trading firms continued to worsen for the third month. After a two-month decline, the **industrial** confidence index grew again and even exceeded its February record. The assessment of the production of the preceding and the next period, that of the stock of orders (including exports) and inventories improved as well. The **construction** confidence index rose significantly in May, reaching a new historic peak. This is due to the improved prospects of structural engineering companies as expectations of civil engineering companies remained essentially unchanged. The assessment of production in the preceding quarter and that of orders became noticeably more favourable. Although the **trade** confidence index has been falling steadily for the third consecutive month, it remained in the relatively narrow band characterising the last four years. The assessment of sales positions and the stock of orders became worse, whereas that of inventories picked up. In the fall of the **service** confidence index in May, the deteriorating assessment of the turnover of the past and next periods played an important part.

The **intentions of employment** grew in industry and construction. However, they declined considerably in trade and slightly in services. Fear of unemployment by households intensified. **Intentions to raise prices** were somewhat stronger in industry and services, whereas they remained unchanged in construction. In trade, the proportion of those planning price rises continued to fall, and more than three quarters of companies in this sector did not plan to change prices. However, inflationary expectations of households intensified steadily. The assessment of the **prospects of the Hungarian economy** improved significantly in industry and slightly in construction, whereas it deteriorated considerably in trade and among consumers, and slightly in services.

The **GKI consumer confidence index** declined in May, following a three-month period of improvement and reaching its historic peak in April. Households assessed their financial situation and savings capacity for the future deteriorating, albeit they remained very op-

timistic. Households were also more pessimistic over the possibilities of purchasing high-value durables.

EXPLANATION TO THE METHODOLOGY:

In line with the methodology used by the EU, GKI surveys the expectations of industry, trade, construction, services and households in the calculation of its business confidence index. GKI economic sentiment index is the weighted average of the consumer confidence index and the business confidence index.

The business confidence index is calculated from the responses of enterprises in industry, trade, construction and services given to questions concerning the state of business and expectations of turnover and employment. (As far as services are concerned, similarly to the practice of the EU, companies of the financial and public sectors have not been included in the surveys yet.) GKI publishes seasonally adjusted data by using appropriate mathematical methods to filter out the discrepancies caused by seasonal effects (e.g., differences in weather conditions between winter and summer, increased demand before Christmas, lower output because of summer vacations).

The consumer confidence index is calculated from responses given to questions concerning the expected financial position of households, the expected economic and unemployment situation of the country, and the prospects for saving.

GKI ECONOMIC SENTIMENT INDEX AND ITS ELEMENTS, 2012-2018

Year	Month	Business confidence index	Consumer confidence index	GKI economic sentiment index
2012	01	-16.3	-56.6	-26.8
	02	-12.4	-51.2	-22.5
	03	-8.1	-49.9	-19
