

23 JULY 2018

GKI'S ECONOMIC SENTIMENT INDEX REACHED ANOTHER PEAK IN JULY

After its historic peak in June, GKI's economic sentiment index continued to rise further in July. According to an empirical survey conducted by GKI (www.gki.hu) with the support of the EU, business expectations became more optimistic than ever before, whereas consumer ones, albeit still very favourable, fell to their lowest level this year.

In the **business sphere** the industrial and construction confidence indices reached a new historic peak in July, the service confidence index also became more favourable, and only the commercial one declined slightly. In **industry**, the assessment of production and orders (especially export orders) of both the last and next periods improved. However, respondents considered inventories slightly higher than in June. Within **construction**, the prospects of civil engineering companies slightly fell and those of structural engineering firms improved (the situation was reverse in June). Although the assessment of production in the preceding three months decreased slightly, it is still very optimistic. The assessment of the stock of orders remained unchanged, the average length of the production period filled with valid orders was 7.8 months in July, longer than ever before. After a significant increase in June, the **commercial** confidence index underwent slight but negative correction in July, remaining in the relatively narrow band in which it had fluctuated in the past 4.5 years. The assessment of sales positions and the level of stocks changed within the statistical margin of error, whereas that of orders worsened slightly. The **services** confidence index grew in June and July as well, but it has not yet reached its peak of three months earlier. The assessment of the state of business and sales outlook for the previous and the next quarters improved. The average capacity utilization remained very high, over 90 per cent (86 per cent in industry).

With the exception of services, **intentions to employ** picked up in all sectors. The fear of unemployment of households was at its lowest level in June; it deteriorated somewhat in July. The main obstacle to production growth is the shortage of labour in all sectors: the lack of skilled labour in industry constituted a limiting factor of growth for half of respondents. Intentions to **lift prices** were typically opposite to those in June: they became stronger in industry and services and more moderate in construction. Inflationary expectations fell slightly among consumers. In trade, however, the share of firms planning price rises continued to grow. The assessment of the **perspectives of the Hungarian economy** deteriorated in all sectors and among consumers during the past two months. This process continued in July, with the exception of industry.

Although **GKI's consumer confidence index** dropped to its lowest point this year in July, it still reflects optimism. Households assessed their financial situation and savings capacity for the future worse than a month ago.

EXPLANATION TO THE METHODOLOGY:

In line with the methodology used by the EU, GKI surveys the expectations of industry, trade, construction, services and households in the calculation of its business confidence index. GKI economic sentiment index is the weighted average of the consumer confidence index and the business confidence index.

The business confidence index is calculated from the responses of enterprises in industry, trade, construction and services given to questions concerning the state of business and expectations of turnover and employment. (As far as services are concerned, similarly to the practice of the EU, companies of the financial and public sectors have not been included in the surveys yet.) GKI publishes seasonally adjusted data by using appropriate mathematical methods to filter out the discrepancies caused by seasonal effects (e.g., differences in weather conditions between winter and summer, increased demand before Christmas, lower output because of summer vacations).

The consumer confidence index is calculated from responses given to questions concerning the expected financial position of households, the expected economic and unemployment situation of the country, and the prospects for saving.

GKI ECONOMIC SENTIMENT INDEX AND ITS ELEMENTS, 2012-2018

Year	Month	Business confidence index	Consumer confidence index	GKI economic sentiment index
2012	01	-16.3	-56.6	-26.8
	02	-12.4	-51.2	-22.5
	03	-8.1	-49.9	-19
	04	-9	-48.8	-19.3
	05	-14	-55.9	-24.9
	06	-14.6	-52.6	-24.5
	07	-13.3	-51.4	-23.2
	08	-14.9	-52.7	-24.7
	09	-16.4	-49.5	-25
