

24 SEPTEMBER 2018

SINCE REACHING ITS HISTORIC PEAK, THE GKI ECONOMIC SENTIMENT INDEX HAS BEEN FALLING FOR THE SECOND MONTH

The GKI economic sentiment index reached its historic peak in July and its lowest point this year in August. It continued to decline in September, and fell close to its level a year ago. According to the empirical survey conducted by GKI (www.gki.hu) with the support of the EU, business expectations also reached their level a year ago, whereas the consumer confidence index rose after its decline in July and August.

Within the **business** confidence index, only trade expectations improved, industrial and building confidence declined significantly, and services expectations remained essentially unchanged. Since reaching its historic peak in July, the **industrial** confidence index has dropped for the second month in September, and it was so low more than a year ago. The assessment of the production situation, prospects, incoming orders (including exports), and inventories all declined compared to August. After reaching its historic peak, the **construction** confidence index dropped to its five-month low in September. Expectations of both civil and structural engineering companies deteriorated in September. The assessment of production in the preceding three months decreased significantly, and the evaluation of incoming orders also dropped. Following a two-month decline, the **trade** confidence index almost reached its all-time peak at the beginning of the year. The assessment of sales positions and incoming orders improved, whereas that of the level of stocks dropped. The confidence index of **services** was essentially unchanged in September. The evaluation of the general business climate improved, whereas sales expectations slightly deteriorated.

The **intentions of employment**, with the exception of trade, where they grew stronger, slightly weakened in August. The fear of unemployment of households fell again after its gradual rise in August, reaching almost its all-time low in summer. Intentions to **raise prices**, also with the exception of trade, where they strengthened slightly, became more moderate, whereas the inflationary expectations of consumers weakened again, after their increase in August. The assessment of the **expected position of the Hungarian economy** deteriorated spectacularly in industry and construction, whereas it improved slightly in trade and services as well as among households.

The **GKI consumer confidence index** rose back to its July level in September after a decline in July and August. Although households assessed their financial position unchanged, they evaluated their future ability to save much better than a month ago. The surge of the latter occurred after a fall in the previous month; however, it was 16 years

ago that consumers assessed their savings opportunities more promising than now. Households were also more optimistic over the possibilities of purchasing high-value durables.

EXPLANATION TO THE METHODOLOGY:

In line with the methodology used by the EU, GKI surveys the expectations of industry, trade, construction, services and households in the calculation of its business confidence index. GKI economic sentiment index is the weighted average of the consumer confidence index and the business confidence index.

The business confidence index is calculated from the responses of enterprises in industry, trade, construction and services given to questions concerning the state of business and expectations of turnover and employment. (As far as services are concerned, similarly to the practice of the EU, companies of the financial and public sectors have not been included in the surveys yet.) GKI publishes seasonally adjusted data by using appropriate mathematical methods to filter out the discrepancies caused by seasonal effects (e.g., differences in weather conditions between winter and summer, increased demand before Christmas, lower output because of summer vacations).

The consumer confidence index is calculated from responses given to questions concerning the expected financial position of households, the expected economic and unemployment situation of the country, and the prospects for saving.

GKI ECONOMIC SENTIMENT INDEX AND ITS ELEMENTS, 2012-2018

Year	Month	Business confidence index	Consumer confidence index	GKI economic sentiment index
2012	01	-16.3	-56.6	-26.8
	02	-12.4	-51.2	-22.5
	03	-8.1	-49.9	-19
	04	-9	-48.8	-19.3
