

26 NOVEMBER 2018

GKI'S ECONOMIC SENTIMENT INDEX WAS FAVOURABLE IN NOVEMBER AS WELL

GKI's economic sentiment index remained essentially unchanged in November. Business expectations continued to improve, whereas consumer ones declined further. The business confidence index is around its yearly average now. Although the consumer confidence index is close to its lowest point this year, it continues to reflect optimism.

In the **business sector** only commercial expectations deteriorated. However, the rise in the industrial confidence index was within the statistical margin of error. Optimism of service companies and, in particular, construction ones has noticeably strengthened. In **industry**, the assessment of the production and stocks of the past period slightly deteriorated, whereas that of production expectations and incoming orders (in particular export orders) improved. The **construction** confidence index rose to a new historic peak in November. The prospects of civil engineering companies improved in November, and those of structural engineering deteriorated slightly compared to the previous month. Although the assessment of production in the preceding three-month period deteriorated somewhat, that of incoming orders was much more favourable. Following its drop in October, the **trade** confidence index continued to decline further in November; however, it was close to the top of the relatively narrow band in which it had fluctuated for almost five years. The assessment of sales positions deteriorated significantly, that of inventories remained unchanged, whereas that of incoming orders improved noticeably. The **services** confidence index rose in November, and the assessment of the state of business and the sales outlook also improved. However, the assessment of the turnover of the previous period deteriorated.

Intentions to employ increased in all sectors, especially in construction. Although the fear of unemployment of households is low, it increased slightly both in October and November. Intentions to **raise prices** strengthened in all sectors, whereas inflationary expectations decreased somewhat among consumers. The assessment of the **perspectives of the Hungarian economy** deteriorated in every industry and among consumers, except in services, and especially in trade.

GKI's consumer confidence index deteriorated even more in November than in October; however, it still reflects optimism. Households assessed their savings capacity in November much worse than in October, though it is true that in this respect unprecedented optimism prevail that was experienced last time more than a decade and a half ago. Households considered the current conditions of purchasing high-value durables much less favourable than in October.

EXPLANATION TO THE METHODOLOGY:

In line with the methodology used by the EU, GKI surveys the expectations of industry, trade, construction, services and households in the calculation of its business confidence index. GKI economic sentiment index is the weighted average of the consumer confidence index and the business confidence index.

The business confidence index is calculated from the responses of enterprises in industry, trade, construction and services given to questions concerning the state of business and expectations of turnover and employment. (As far as services are concerned, similarly to the practice of the EU, companies of the financial and public sectors have not been included in the surveys yet.) GKI publishes seasonally adjusted data by using appropriate mathematical methods to filter out the discrepancies caused by seasonal effects (e.g., differences in weather conditions between winter and summer, increased demand before Christmas, lower output because of summer vacations).

The consumer confidence index is calculated from responses given to questions concerning the expected financial position of households, the expected economic and unemployment situation of the country, and the prospects for saving.

GKI ECONOMIC SENTIMENT INDEX AND ITS ELEMENTS, 2012-2018

Year	Month	Business confidence index	Consumer confidence index	GKI economic sentiment index
2012	01	-16.3	-56.6	-26.8
	02	-12.4	-51.2	-22.5
	03	-8.1	-49.9	-19
	04	-9	-48.8	-19.3
	05	-14	-55.9	-24.9
