

## **GKI-ERSTE ECONOMIC SENTIMENT INDEX AT ITS TWO-YEAR PEAK**

After a significant decline in April, GKI-Erste economic confidence index adjusted for seasonal effects jumped in May and June as well, thus continuing its increase started in the autumn of 2012. According to the empirical survey conducted by GKI ([www.gki.hu](http://www.gki.hu)) with the support of the EU, initially the optimistic mood was almost exclusively the result of the improvement in consumer confidence, its effect has petered out in the last four months. However, after many months of stagnation business expectations have gained momentum since May. (The June survey was conducted before the announcement of the Varga package in June.)

In June, expectations improved markedly in all sectors of the **business sphere** except for trade. In **industry** expectations on production improved sharply, and the assessment of the stock of orders (including export orders) was better, too. The **construction** confidence index continued to rise, though to a lesser extent than in May. The evaluation of the production level of the past three months became significantly better, whereas that of orders improved slightly. Expectations in **trade** deteriorated, though to a lesser extent than their improvement in May. The assessment of sales positions and expected orders turned worse, whereas that of stocks picked up. In June, the **services** confidence index rose to the highest degree, and respondents in this sector were particularly optimistic about the expected sales.

The **intentions of employment** in industry remained unchanged, whereas they improved slightly in other sectors. Fear from unemployment picked up somewhat among households. With the exception of trade, in all sectors the share of firms foreseeing **price reductions** exceeded those anticipating higher prices both in May and June, but the gap narrowed. The planned level of price rises became more moderate in trade as well. However, the inflationary expectations of consumers increased definitely. The assessment of the **perspectives of the Hungarian economy** improved significantly, and the numbers of optimistic and pessimistic firms are no longer terribly far apart. However, consumers' expectations deteriorated in this regard in June.

The **GKI consumer confidence index** dropped in June, though to a lesser extent than its increase in May. Households assessed their financial situation for the following year worse and their savings capacity and the possibility of purchasing high-value durables slightly better.

**EXPLANATION TO THE METHODOLOGY:**

In line with the methodology used by the EU, GKI surveys the expectations of industry, trade, construction, services and households in the calculation of its business confidence index. GKI-Erste economic sentiment index is the weighted average of the consumer confidence index and the business confidence index.

The business confidence index is calculated from the responses of enterprises in industry, trade, construction and services given to questions concerning the state of business and expectations of turnover and employment. (As far as services are concerned, similarly to the practice of the EU, companies of the financial and public sectors have not been included in the surveys yet.) GKI publishes seasonally adjusted data by using appropriate mathematical methods to filter out the discrepancies caused by seasonal effects (e.g., differences in weather conditions between winter and summer, increased demand before Christmas, lower output because of summer vacations).

The consumer confidence index is calculated from responses given to questions concerning the expected financial position of households, the expected economic and unemployment situation of the country, and the prospects for saving.

## GKI-ERSTE ECONOMIC SENTIMENT INDEX AND ITS ELEMENTS, 2008-2013

Year	Month	Business confidence index	Consumer confidence index	GKI-Erste economic sentiment index
2008.	I.	-9.6	-47.8	-19.5
	II.	-7.6	-47.6	-18
	III.	-8.1	-52.4	-19.7
	IV.	-11.8	-55.4	-23.2
	V.	-7.7	-52.3	-19.3
	VI.	-9.1	-46.1	-18.7
	VII.	-8.2	-42.9	-17.2
	VIII.	-9	-43.5	-18
	IX.	-9.8	-42.5	-18.3
	X.	-15	-54	-25.2
	XI.	-25	-56.7	-33.2
	XII.	-28.1	-60.8	-36.6
2009.	I.	-30.3	-66.1	-39.6
	II.	-33.9	-68.5	-42.9
	III.	-37.4	-70	-45.8
	IV.	-36.3	-72.3	-45.7
	V.	-29	-68.3	-39.2
	VI.	-28.9	-64.3	-38.1
	VII.	-24.7	-63.1	-34.7
	VIII.	-22.2	-59.8	-32
	IX.	-22.1	-56.9	-31.2
	X.	-17.8	-50.8	-26.4
	XI.	-19.1	-51.9	-27.6
	XII.	-15.9	-50.1	-24.8
2010.	I.	-14.1	-49.1	-23.2
	II.	-13.7	-47.5	-22.5
	III.	-10.5	-41.2	-18.4
