

THE RISE OF THE GKI-ERSTE ECONOMIC SENTIMENT INDEX STOPPED IN JULY

The rise of the GKI-Erste economic sentiment index (adjusted for seasonal effects) experienced in May and June came to a halt in July. According to the empirical survey conducted by GKI (www.gki.hu) with the support of the EU, this minimum correction was the result of some deterioration in business expectations as consumer expectations improved slightly.

In the **business sector** expectations of industrial and service companies deteriorated, whereas those of construction and trading enterprises improved. Following an increase of two months, the **industrial** confidence index dropped a little again in July. The assessment of the production of the preceding period and the stock of orders, including exports, deteriorated, whereas that of the level of stocks stagnated. Respondents considered only the production prospects of the next period somewhat more favourable. However, the assessment of capacity utilisation, the relationship of expected demand and existing capacities, competitive positions, the stock of contracts, and the expected demand of exports all improved compared to a quarter ago. Respondents felt some decrease only in the stock of new orders. In 2013 the **construction** confidence index has almost continuously and significantly increased. The upward trend continued in July as well, though at a smaller rate than before. The assessment of the production level and the stock of orders of the previous three months improved significantly. In **trade** the confidence index improved but it did not compensate for its decline in June. The assessment of sales positions and expected orders improved, and so did that of the level of stocks. The **services** confidence index fell slightly in July. The evaluation of the general business climate and sales in the subsequent period became worse, whereas the assessment of sales in the preceding period improved.

Intentions to employ weakened in industry and construction. It improved in trade and services. The fear from unemployment of households eased. **Price expectations** in industry remained unchanged, whereas they increased slightly in other sectors. However, the inflationary expectations of consumers dropped considerably. The assessment of the **perspectives of the Hungarian economy** deteriorated in every industry, especially in trade; however, it improved among consumers.

The **GKI consumer confidence index** improved in July but it did not compensate for its decline in June. Households felt their financial situation for the following year and the possibility of purchasing high-value durables unchanged, whereas they assessed their savings capacity slightly deteriorating.

EXPLANATION TO THE METHODOLOGY:

In line with the methodology used by the EU, GKI surveys the expectations of industry, trade, construction, services and households in the calculation of its business confidence index. GKI-Erste economic sentiment index is the weighted average of the consumer confidence index and the business confidence index.

The business confidence index is calculated from the responses of enterprises in industry, trade, construction and services given to questions concerning the state of business and expectations of turnover and employment. (As far as services are concerned, similarly to the practice of the EU, companies of the financial and public sectors have not been included in the surveys yet.) GKI publishes seasonally adjusted data by using appropriate mathematical methods to filter out the discrepancies caused by seasonal effects (e.g., differences in weather conditions between winter and summer, increased demand before Christmas, lower output because of summer vacations).

The consumer confidence index is calculated from responses given to questions concerning the expected financial position of households, the expected economic and unemployment situation of the country, and the prospects for saving.

GKI-ERSTE ECONOMIC SENTIMENT INDEX AND ITS ELEMENTS, 2008-2013

Year	Month	Business confidence index	Consumer confidence index	GKI-Erste economic sentiment index
2008.	I.	-9.6	-47.8	-19.5
	II.	-7.6	-47.6	-18
	III.	-8.1	-52.4	-19.7
	IV.	-11.8	-55.4	-23.2
	V.	-7.7	-52.3	-19.3
	VI.	-9.1	-46.1	-18.7
	VII.	-8.2	-42.9	-17.2
