

## **BUSINESS CONFIDENCE ROSE SLIGHTLY IN AUGUST, WHEREAS CONSUMER CONFIDENCE DECREASED**

In August the GKI-Erste economic sentiment index adjusted for seasonal effects was essentially unchanged compared to the previous month. This was the result of opposite developments. According to the empirical survey conducted by GKI ([www.gki.hu](http://www.gki.hu)) with the support of the EU business expectations improved slightly, whereas consumer ones deteriorated.

In August in the **business sphere** expectations of commercial companies improved definitely, those of industrial companies increased within the statistical margin of error, whereas no substantive changes took place in construction and services. The **industrial** confidence index corrected somewhat upwards in August, which is a positive development, taking into account its decline since May. The assessment of incoming orders and production prospects improved as well, whereas the evaluation of inventories stagnated. The **construction** confidence index fell within the statistical margin of error in August, that is, it was almost the same as in the previous month being at its twelve-year peak. Although the assessment of production in the preceding three-month worsened significantly, that of orders improved slightly. In **trade** the assessment of sales positions, with rising inventory levels, improved, and orders are expected to improve significantly. The confidence index of **services** was essentially unchanged in August. Opinions about the business climate of the past period hardly changed, whereas retail trade turnover in the next quarter was considered somewhat more pessimistic than in July.

In most sectors the share of those expecting **price increase** is almost equal to that of those anticipating reduction. Inflationary expectations declined in all sectors in August. The situation is similar for retail expectations. **Intentions to employ** improved in all sectors except construction. The share of those planning recruitment exceeded those planning layoffs in all sectors included in the survey. Opinions about the **prospects of the Hungarian economy** deteriorated considerably among consumers and in all the four sectors. In the business sector, the proportions of optimistic and pessimistic firms do not differ significantly from each other.

After three months of stagnation, the **GKI consumer confidence index** decreased slightly in August. Households assessed their financial situation and their savings capacity for the following year slightly worse than in the previous month. In addition, the fear of unemployment somewhat strengthened.

## EXPLANATION TO THE METHODOLOGY:

In line with the methodology used by the EU, GKI surveys the expectations of industry, trade, construction, services and households in the calculation of its business confidence index. GKI-ERSTE economic sentiment index is the weighted average of the consumer confidence index and the business confidence index.

The business confidence index is calculated from the responses of enterprises in industry, trade, construction and services given to questions concerning the state of business and expectations of turnover and employment. (As far as services are concerned, similarly to the practice of the EU, companies of the financial and public sectors have not been included in the surveys yet.) GKI publishes seasonally adjusted data by using appropriate mathematical methods to filter out the discrepancies caused by seasonal effects (e.g., differences in weather conditions between winter and summer, increased demand before Christmas, lower output because of summer vacations).

The consumer confidence index is calculated from responses given to questions concerning the expected financial position of households, the expected economic and unemployment situation of the country, and the prospects for saving.

## GKI-ERSTE ECONOMIC SENTIMENT INDEX AND ITS ELEMENTS, 2008-2014

Year	Month	Business confidence index	Consumer confidence index	GKI-Erste economic sentiment index
2008.	I.	-9.6	-47.8	-19.5
	II.	-7.6	-47.6	-18
	III.	-8.1	-52.4	-19.7
	IV.	-11.8	-55.4	-23.2
	V.	-7.7	-52.3	-19.3
	VI.	-9.1	-46.1	-18.7
	VII.	-8.2	-42.9	-17.2
	VIII.	-9	-43.5	-18
	IX.	-9.8	-42.5	-18.3
	X.	-15	-54	-25.2
	XI.	-25	-56.7	-33.2
	XII.	-28.1	-60.8	-36.6
2009.	I.	-30.3	-66.1	-39.6
	II.	-33.9	-68.5	-42.9
	III.	-37.4	-70	-45.8
