## GKI-ERSTE ECONOMIC SENTIMENT INDEX AT ITS PEAK AGAIN IN OCTOBER

In October the GKI-Este economic sentiment index adjusted for seasonal effects almost reached its fifteen-year peak value measured in April this year. According to the empirical survey conducted by GKI ([www.gki.hu](http://www.gki.hu)) with the support of the EU both business and consumer expectations improved considerably. Companies were so optimistic last time in the summer of 1998, whereas consumers in the spring of 2006.

Expectations became more upbeat in all sectors of the **business sphere** except for trade, where they deteriorated significantly in October. The improvement of **industrial** expectations was mainly due to the fact that respondents assessed the stock of orders (mainly that of domestic ones) and production outlook much better. The assessment of inventories became slightly more favourable, too; however, that of past production remained unchanged. The average capacity utilization rate and the stock of contracts increased, including new orders. The **construction** confidence index rose in October, reaching its thirteen-year peak. Although the assessment of production in the preceding three-month deteriorated significantly; that of orders became more favourable. The length of the production period filled with valid orders was slightly longer compared with the previous year; however, it was slightly less than a quarter ago. The **trade** confidence index fell after its two-month increase. The evaluation of sales positions, with stagnant inventory levels, deteriorated moderately, whereas that of expected orders fell noticeably. The **services** confidence index rose in October, mainly due to the more optimistic assessment in expected turnover. However, the assessment of the state of business became worse.

In October, **intentions to employ** improved noticeably in all sectors except trade. The fear of unemployment of households eased. The proportion of companies planning a **price increase** dropped in construction and trade, it remained unchanged in services, whereas it rose in industry. The inflationary expectations of consumers continued to ease. The assessment of the **Hungarian economy's** prospects in services and particularly in industry improved, whereas it deteriorated in construction, trade and among consumers.

After its September increase, the **GKI consumer confidence index** continued to rise in October, though to a lesser extent. Both the assessment of consumers' own financial position and the prospects of their saving capacity turned better for the next 12 months compared with the previous one. Households considered the possibility of purchasing high-value durables somewhat better.

## EXPLANATION TO THE METHODOLOGY:

In line with the methodology used by the EU, GKI surveys the expectations of industry, trade, construction, services and households in the calculation of its business confidence index. GKI-Erste economic sentiment index is the weighted average of the consumer confidence index and the business confidence index.

The business confidence index is calculated from the responses of enterprises in industry, trade, construction and services given to questions concerning the state of business and expectations of turnover and employment. (As far as services are concerned, similarly to the practice of the EU, companies of the financial and public sectors have not been included in the surveys yet.) GKI publishes seasonally adjusted data by using appropriate mathematical methods to filter out the discrepancies caused by seasonal effects (e.g., differences in weather conditions between winter and summer, increased demand before Christmas, lower output because of summer vacations).

The consumer confidence index is calculated from responses given to questions concerning the expected financial position of households, the expected economic and unemployment situation of the country, and the prospects for saving.

## GKI-ERSTE ECONOMIC SENTIMENT INDEX AND ITS ELEMENTS, 2008-2014

Year	Month	Business confidence index	Consumer confidence index	GKI-Erste economic sentiment index
2008.	I.	-9.6	-47.8	-19.5
	II.	-7.6	-47.6	-18
	III.	-8.1	-52.4	-19.7
	IV.	-11.8	-55.4	-23.2
	V.	-7.7	-52.3	-19.3
	VI.	-9.1	-46.1	-18.7
	VII.	-8.2	-42.9	-17.2
	VIII.	-9	-43.5	-18
	IX.	-9.8	-42.5	-18.3
	X.	-15	-54	-25.2
	XI.	-25	-56.7	-33.2
	XII.	-28.1	-60.8	-36.6
2009.	I.	-30.3	-66.1	-39.6
	II.	-33.9	-68.5	-42.9
	III.	-37.4	-70	-45.8
	IV.	-36.3	-72.3	-45.7
	V.	-29	-68.3	-39.2
	VI.	-28.9	-64.3	-38.1
	VII.	-24.7	-63.1	-34.7
